

CONTENTS

Chapter 1 Balancing

1 - 124

1.1	Introduction	2
1.2	Balancing of Rotating Masses	2
1.3	Static and Dynamic Balancing	4
1.4	Rules for Solving Problems of Rotating Unbalance	6
1.5	Solved Examples	8
1.6	Balancing of Reciprocating Masses in Engines	33
1.7	Partial Primary Balancing	34
1.8	Solved Examples	35
1.9	Balancing of Multi-cylinder Inline Engines	38
1.10	Solved Examples	42
1.11	Balancing of V-Engines	81
1.12	Solved Examples	85
1.13	Balancing of W-engines	92
1.14	Solved Example	96
1.15	Balancing of Radial Engines - Direct and Reverse Cranks .	97
1.16	Solved Examples	99
1.17	Balancing Machines	116
1.18	Grades of Balancing	118
	Exercises ?	121
	Problems	122

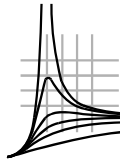

■ Chapter 2 Free Vibrations

125 - 332

2.1	Introduction	126
2.2	Elements of A Vibratory System	126
2.3	Important Terms Associated with a Vibrating System	127
2.4	Mathematical Modeling of a Vibrating System	131
2.5	Concept of Linear and Non-Linear Vibration	135
2.6	Equivalent Spring Stiffness	136
2.7	Equivalent Dampers	138
2.8	Analysis of a Spring Mass System	140
2.9	Equation of Motion in case of a Free Undamped System .	140
2.10	Equivalent Systems	147
2.11	Solved Examples	150
2.12	Solved Examples	185
2.13	Solved Examples	200
2.14	Solved Examples	213
2.15	Solved Examples	220
2.16	Free Damped Vibrations	247
2.17	Dry Friction or Coulomb Damping	247
2.18	Decay in Coulomb Damping	252
2.19	Final Rest Position in Coulomb Damping	254
2.20	Solved Examples	255
2.21	Linear Damping	266
2.22	Equation of Motion for Viscous Damper	267
2.23	Critical Damping Coefficient	268
2.24	Damping Factor	268
2.25	Solution of Free Damped Vibrations	269
2.26	Over Damped System	271
2.27	Critically Damped System	271

2.28	<i>Underdamped System</i>	272
2.29	<i>Logarithmic Decrement</i>	275
2.30	<i>Significance of Logarithmic Decrement</i>	276
2.31	<i>Summary of Damped Systems</i>	279
2.32	<i>Solved Examples</i>	280
2.33	<i>Motion with Negative Damping Factor</i>	321
2.34	<i>Types of Dampers</i>	323
	<i>Exercises ?</i>	326
	<i>Problems</i>	327

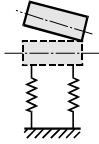

■ Chapter 3

Forced Damped Vibrations

333 - 406

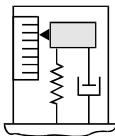

3.1	<i>Forced Vibrations with Harmonic Excitation</i>	334
3.2	<i>Analytical Solution of Forced Damped Vibration</i>	335
3.3	<i>Vector Representation of Forced Vibrations</i>	339
3.4	<i>Magnification Factor or Magnifier</i>	341
3.5	<i>Frequency Response Curves</i>	342
3.6	<i>Graph of Phase Lag versus Frequency Ratio</i>	343
3.7	<i>Force Transmissibility</i>	344
3.8	<i>Vector Representation of Transmissibility</i>	346
3.9	<i>Transmissibility Curves</i>	347
3.10	<i>Vibration Isolation</i>	348
3.11	<i>Forced Vibrations with Rotating or Reciprocating Unbalance</i>	349
3.12	<i>Forced Vibrations due to Base Excitation</i>	353
3.13	<i>Solved Examples</i>	356
	<i>Exercises ?</i>	403
	<i>Problems</i>	404

■ Chapter 4

Two Degrees of Freedom - Free Vibrations 407 - 590

4.1	Introduction	408
4.2	Principle Mode of Vibration	408
4.3	Formulation of Equation	409
4.4	Semi-definite Systems	417
4.5	Solved Examples	419
4.6	Free Torsional Vibration of a Two Rotor System	483
4.7	Torsionally Equivalent Shaft	488
4.8	Solved Examples	489
4.9	Free Torsional Vibration of a Three Rotor System	523
4.10	Solved Examples	526
4.11	Torsional Vibrations of a Geared System	538
4.12	Solved Examples	543
4.13	Critical Speed of Shafts	564
4.14	Undamped Vertical Shaft with a Single Rotor	564
4.15	Damped Vertical Shaft with a Single Rotor	567
4.16	Secondary Critical Speeds in Horizontal Shafts	570
4.17	Solved Examples	571
	Exercises ?	583
	Problems	584

■ Chapter 5

Vibration Measurements and Control 591- 648

5.1	Introduction	592
5.2	Seismic Vibration Measurements	594
5.3	Types of Vibration Pickups	600

5.4	<i>Optical Recording Instrument</i>	603
5.5	<i>Vibration Frequency Measurement</i>	603
5.6	<i>Solved Examples</i>	605
5.7	<i>Vibration Exciters</i>	620
5.8	<i>Vibration Meter</i>	623
5.9	<i>Acceptable Vibration Standards</i>	624
5.10	<i>FFT Spectrum Analyser</i>	625
5.11	<i>Vibration Monitoring of Machines</i>	627
5.12	<i>Vibration Absorber</i>	629
5.13	<i>Solved Example</i>	640
5.14	<i>Vibration Control</i>	643
5.15	<i>Control of Natural Frequencies</i>	645
5.16	<i>Failures due to Uncontrolled Vibrations</i>	645
	<i>Exercises ?</i>	646
	<i>Problems</i>	647

■ Chapter 6 Noise

649 - 682

6.1	<i>Concept of Sound and Noise</i>	650
6.2	<i>Human Hearing Mechanism</i>	650
6.3	<i>Concept of Sound Field</i>	653
6.4	<i>Fundamental Equation for Propagation of Sound</i>	654
6.5	<i>Energy Density</i>	660
6.6	<i>Acoustic Intensity</i>	662
6.7	<i>Acoustic Impedance</i>	663
6.8	<i>The Decibel Scale</i>	664
6.9	<i>Addition of Sounds</i>	666
6.10	<i>Solved Examples</i>	668
6.11	<i>Noise Measurement System</i>	672
6.12	<i>Sound Level Meter</i>	673

6.13	<i>Allowed Exposure Levels and Time Limits</i>	674
6.14	<i>Fundamentals of Noise Control</i>	675
6.15	<i>Source Control</i>	676
6.16	<i>Path Control</i>	678
6.17	<i>Noise Control at Receiver</i>	679
6.18	<i>Noise Absorbers</i>	679
	<i>Exercises ?</i>	681
	<i>Problems</i>	682

Appendix

i - iv

A	<i>Moment of Inertia</i>	ii
B	<i>Mass Moment of Inertia</i>	iii
C	<i>Deflection of Typical Beams</i>	iv

Alphabetical Index

v - ix
